

Wipeout

Wipeout - it's a fully self-contained product for call centers with flexible configuration of operators number, services and reports. The main purpose was to make functional and clear product. And we did it.

01 Data Model

In the development process, we tried several scenarios of user behavior and divided the system into two parts. Administrator and Operator. We had an idea of a component or layout, which we have tried on all screens at the same time

02 Wireframes

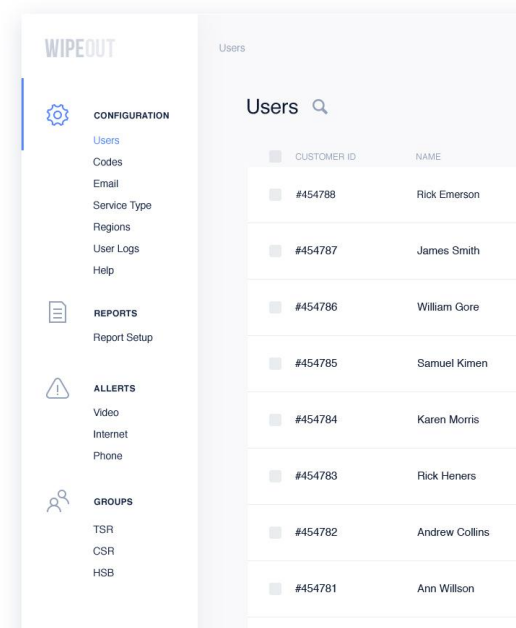

The wireframes were designed with the highest attention to system usability for administrators and operators at the same time. We designed the visual style of both parts of the system, giving the specification of the behavior of each user.

ICONS

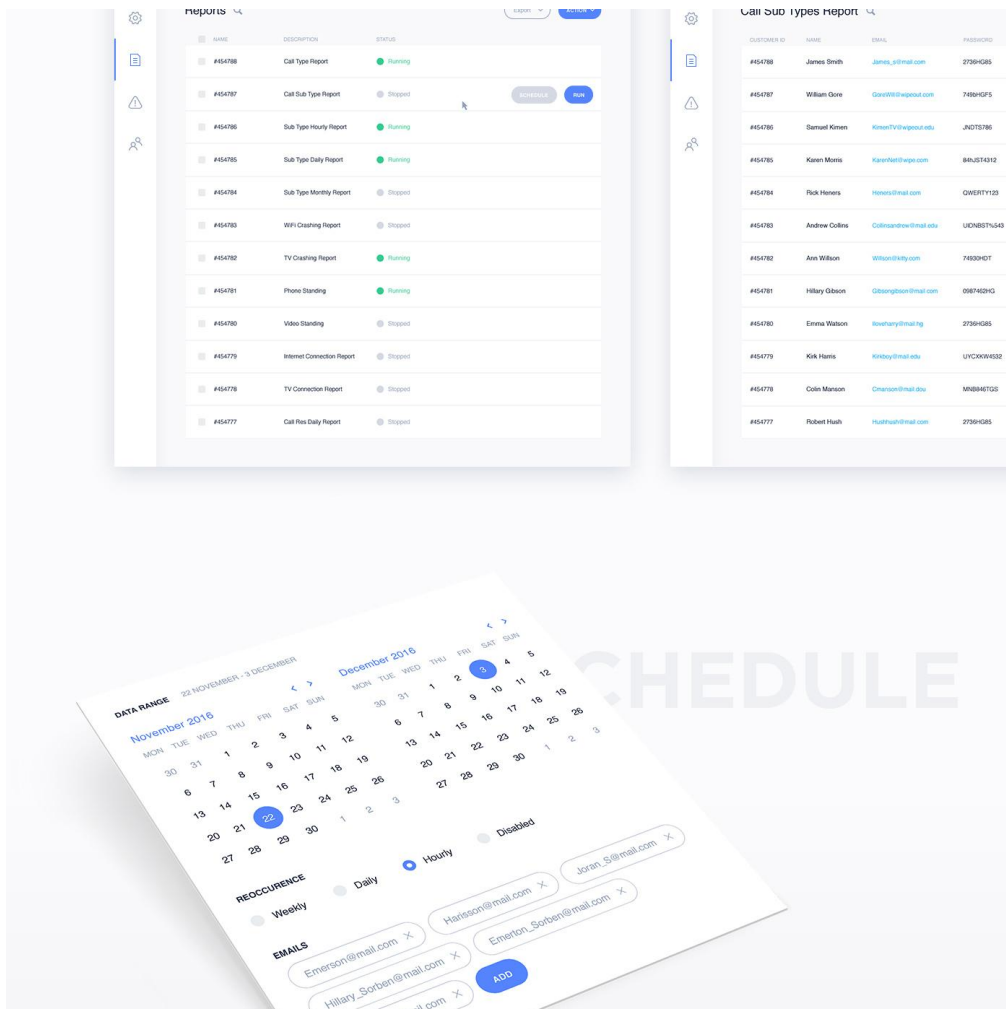

03 Admin Interface

The main principle of the admin interface design was simplicity and unification that makes it simple to expand and edit the interface in the part of the administrator and operator.

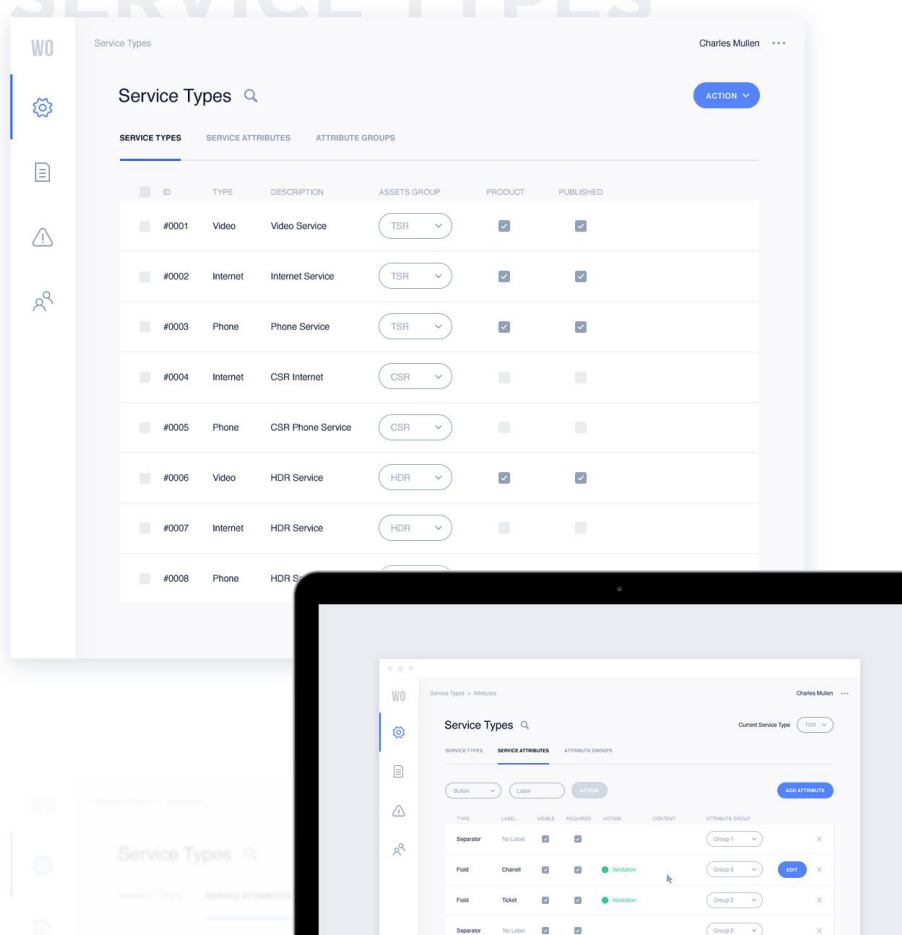

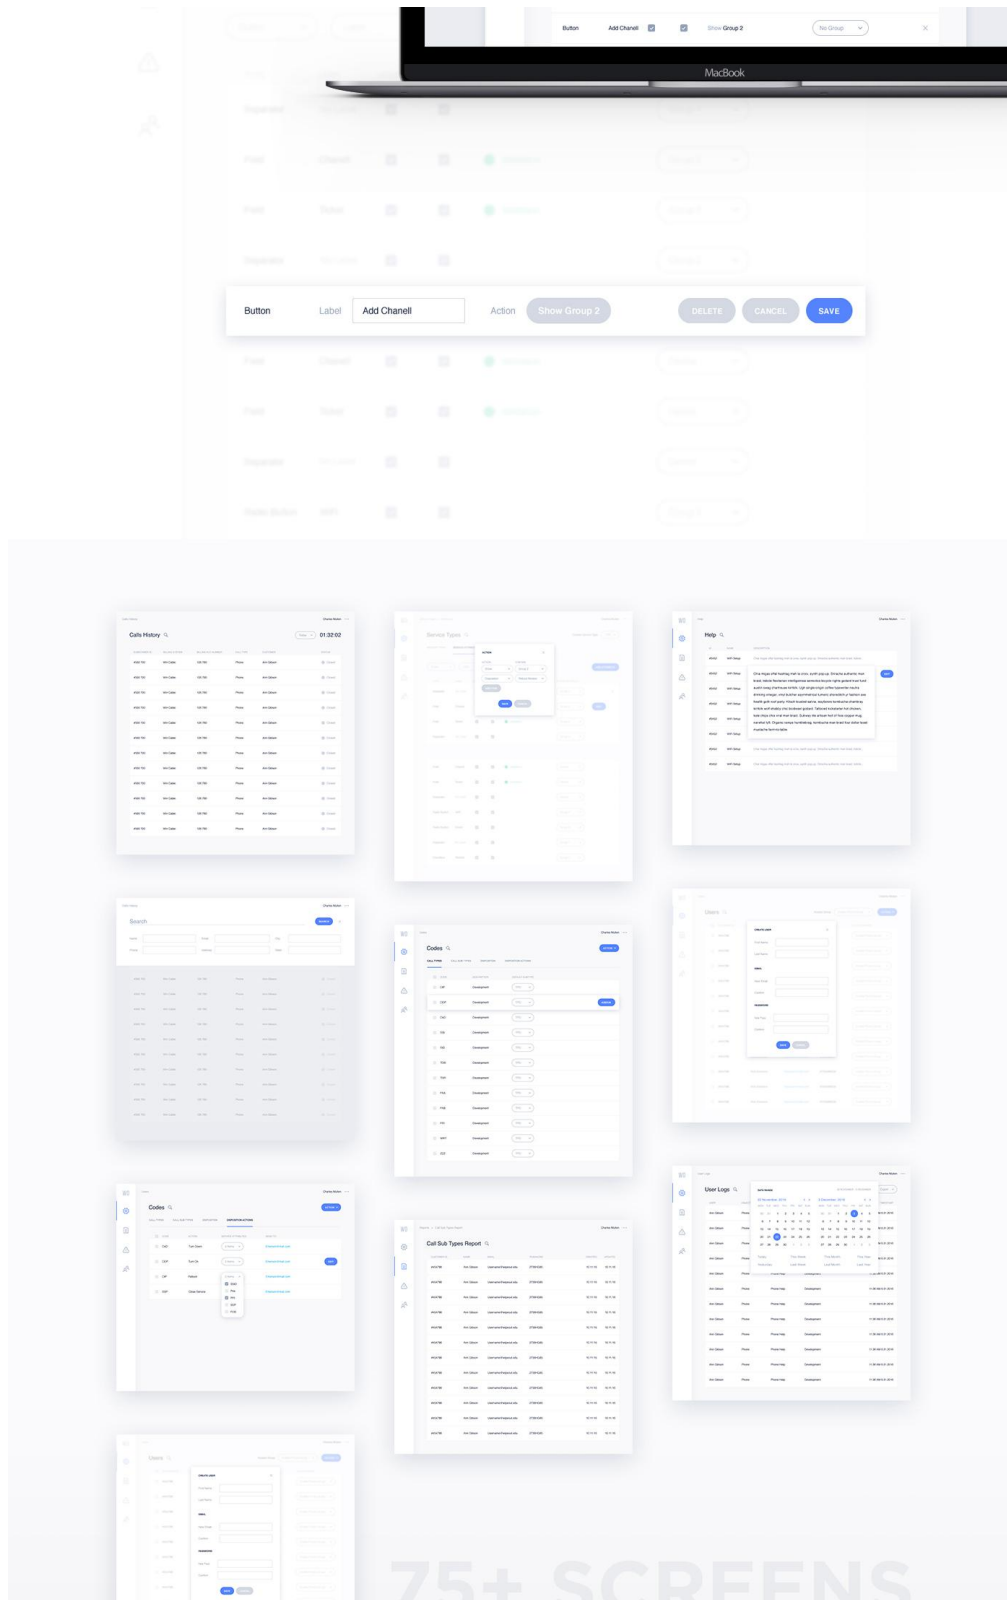

REPORTS

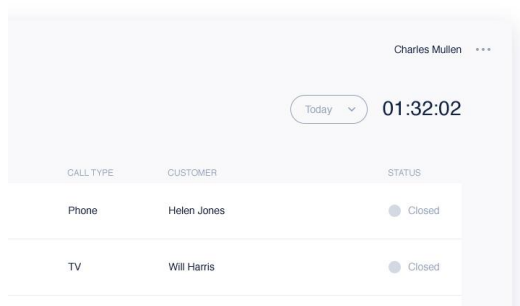

SERVICE TYPES

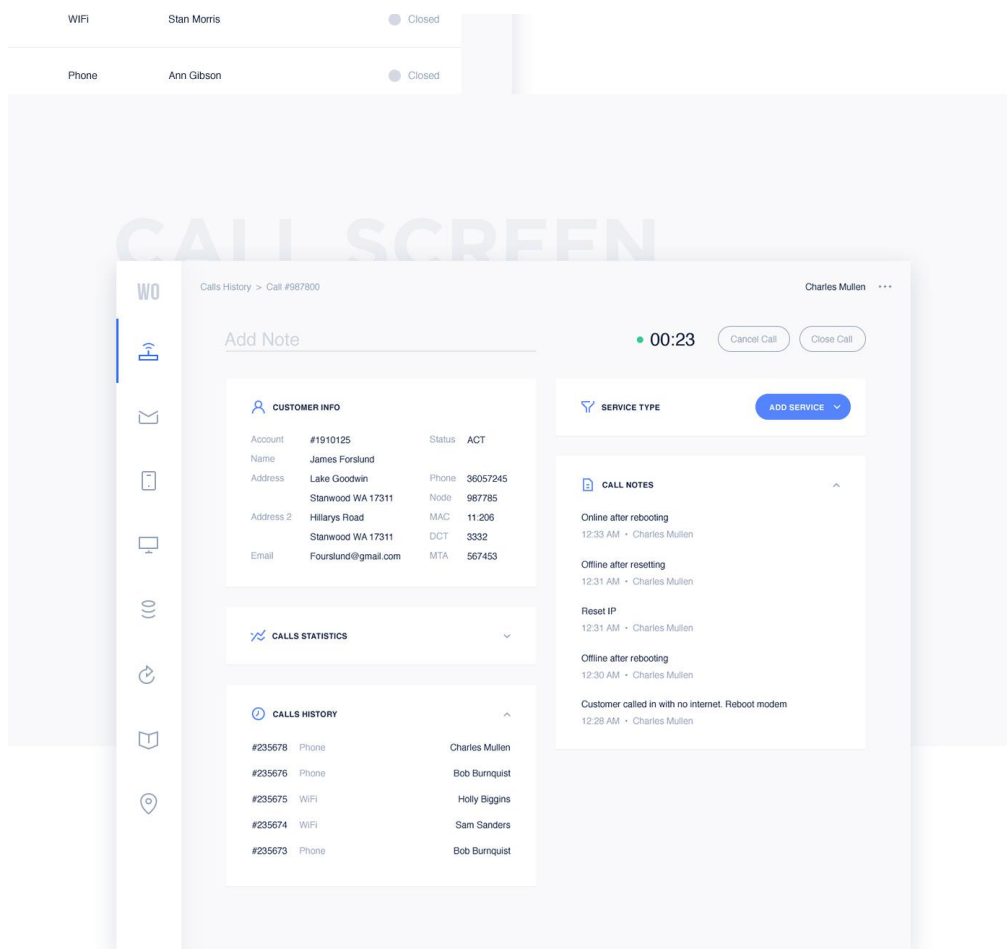

04 Operator interface

The operator interface is implemented with the ability to work both with online calls and closed user requests, considering the convenience of tracking stories and statistics. Also the design is completely responsible

Fully Customizable

One of the main advantages of the service is customizable and editable interface for each individual operator based on personal preferences. Thus, the operator also becomes a participant in the creation of design
